Winter Rinse

Limited Time
(2017 - 2018)

What is Rinse-It ?

- * Eliminates Harmful Effects of Salt
- * Alleviates White Residue
- * Super Concentrated
- * Non-Abrasive
- * Cleans - Maintains
- * Biodegradable Winter Rinse

During snows and freezing weather, various types of salts- sodium, aluminum and calcium chlorides are used to melt ice and snow. These chlorides create road salts that track in on floorings and remain on salt spreaders and vehicles used during the winter, accelerating rust and corrosion. These chlorides create a grayish tinge, a weathered look on brick and other masonry. Rinse-It cleans surfaces and eliminates the harmful effects of chlorides on most surfaces. It alleviates the white residues that form on surfaces due to the salt build up. Revolutionary product makes the mineral deposits water soluble so they dissolve and rinse away with water. Powerful detergents lift dirt grease and soils to clean and condition. Rinse-It will clean without leaving any dulling film behind.

4 L Jug \$14.95 (2800-4)

20 L Pail \$59.95 (2800-20)
